ONLINE EXAM PORTAL ? TESTING EVIDENCE

System Validation Report

Real-browser validation against an isolated local application

Repository: SE-Team-6/online_exam_portal

Branch: main **Commit:** 2914e5c55a79108e5b24fbb9bdd181fffbf119a1

Evidence date: 10 November 2026

Scope: Results and evidence collected for the current main checkout; no full-system sign-off implied.

Prepared from actual automated test output, browser validation output, screenshots, and the main-branch CI coverage artifact. Untested items are explicitly identified.

Environment: Local frontend at `http://127.0.0.1:5173`, local backend at port 3000, isolated MongoDB database `oep_phase2_browser`.

Account: Seeded local test student `student1@example.com`. No production data or real-user account was used. Password is intentionally omitted from this report.

> **Data mutations:** One exam attempt, two saved answers, and one submitted result were created in the isolated test database.

Executed browser scenarios

#	Scenario	Result	Observed result
1	Login page rendered	PASS	Login heading and fields visible at the local frontend URL.
2	Seed student login and dashboard	PASS	Seed account authenticated; redirected to the student dashboard.
3	Sample exam listed and started	PASS	?Sprint 1 Sample Exam? was listed and the exam view opened.
4	Question display and timer	PASS	Question screen rendered; countdown showed 30:00 in the captured observation.
5	Save two answers and retain first selection during navigation	PASS	Both saves displayed ?Saved?; Option A remained selected when returning to Question 1.
6	Confirm exam submission	PASS	Confirmation dialog appeared; after confirmation, the success message appeared.
7	Display submitted result	PASS	Results row showed 2 / 10, 20.0%, and 100th percentile for the sample exam.

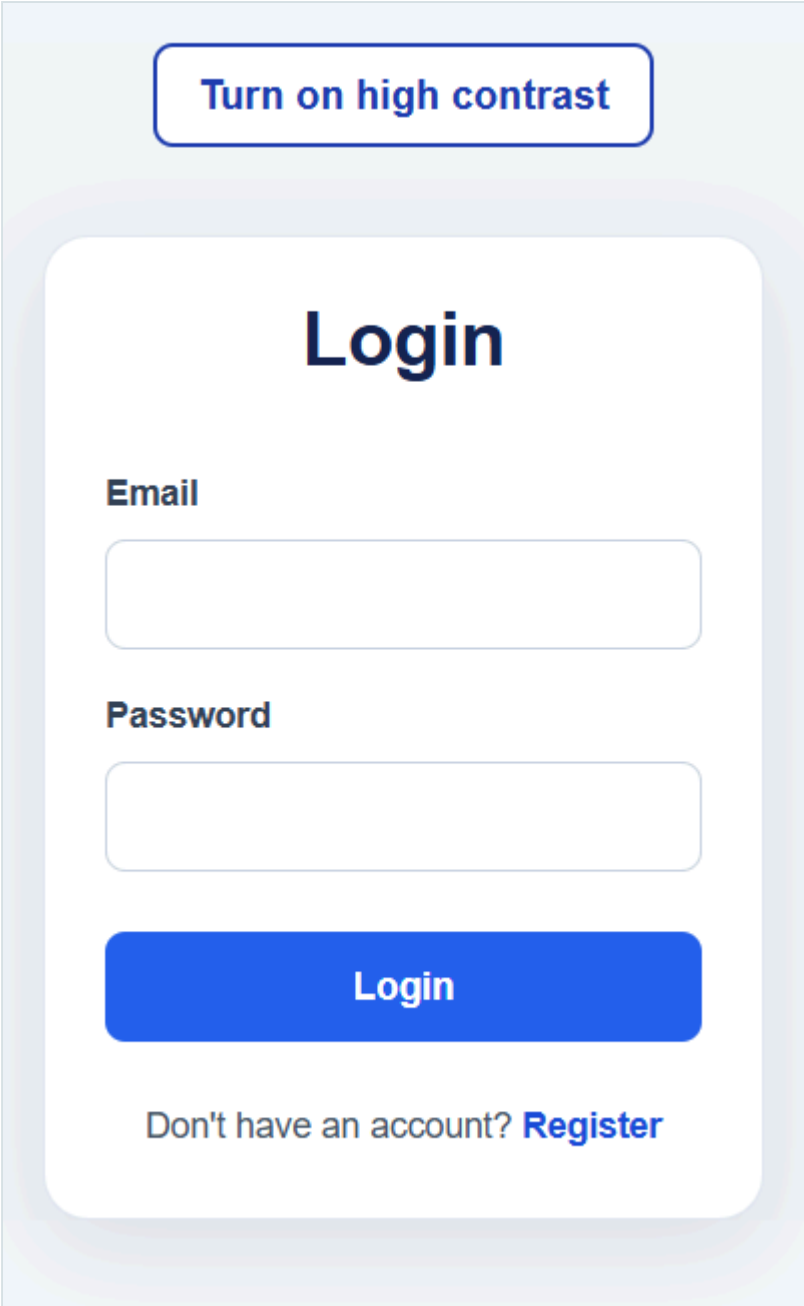

Explicitly untested

- **UNTESTED** ? Registration
- **UNTESTED** ? Invalid credentials
- **UNTESTED** ? Account lockout
- **UNTESTED** ? Role restrictions
- **UNTESTED** ? Timer expiry / automatic submission
- **UNTESTED** ? Admin workflows
- **UNTESTED** ? Instructor workflows

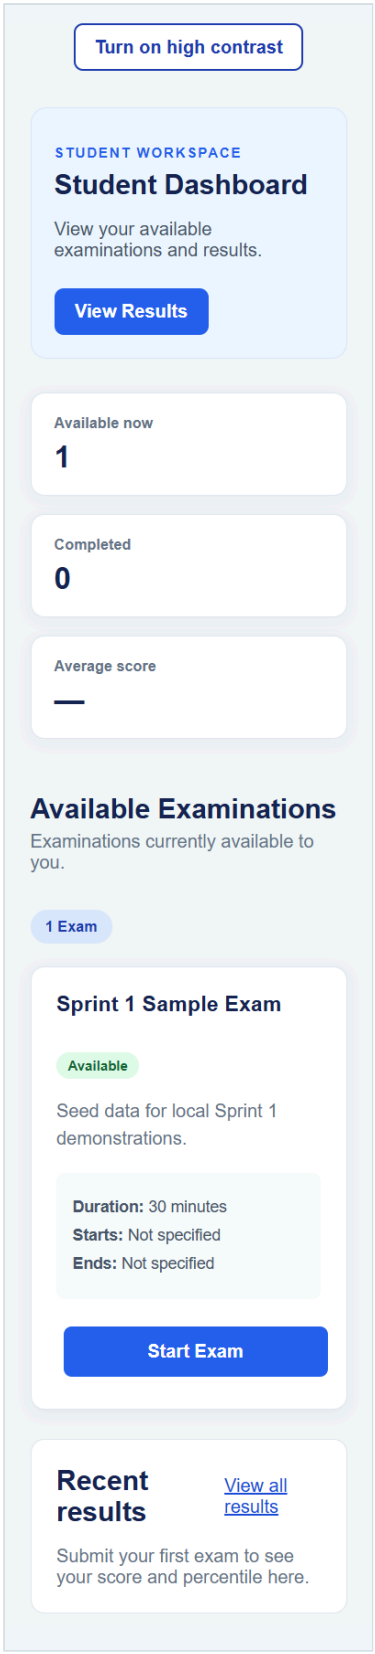

> **Scope limitation:** These seven scenarios are a bounded browser workflow, not full-system validation or release sign-off. Other requirements, roles, error paths, security, performance, availability, and load scenarios were not established by this run.

Browser evidence

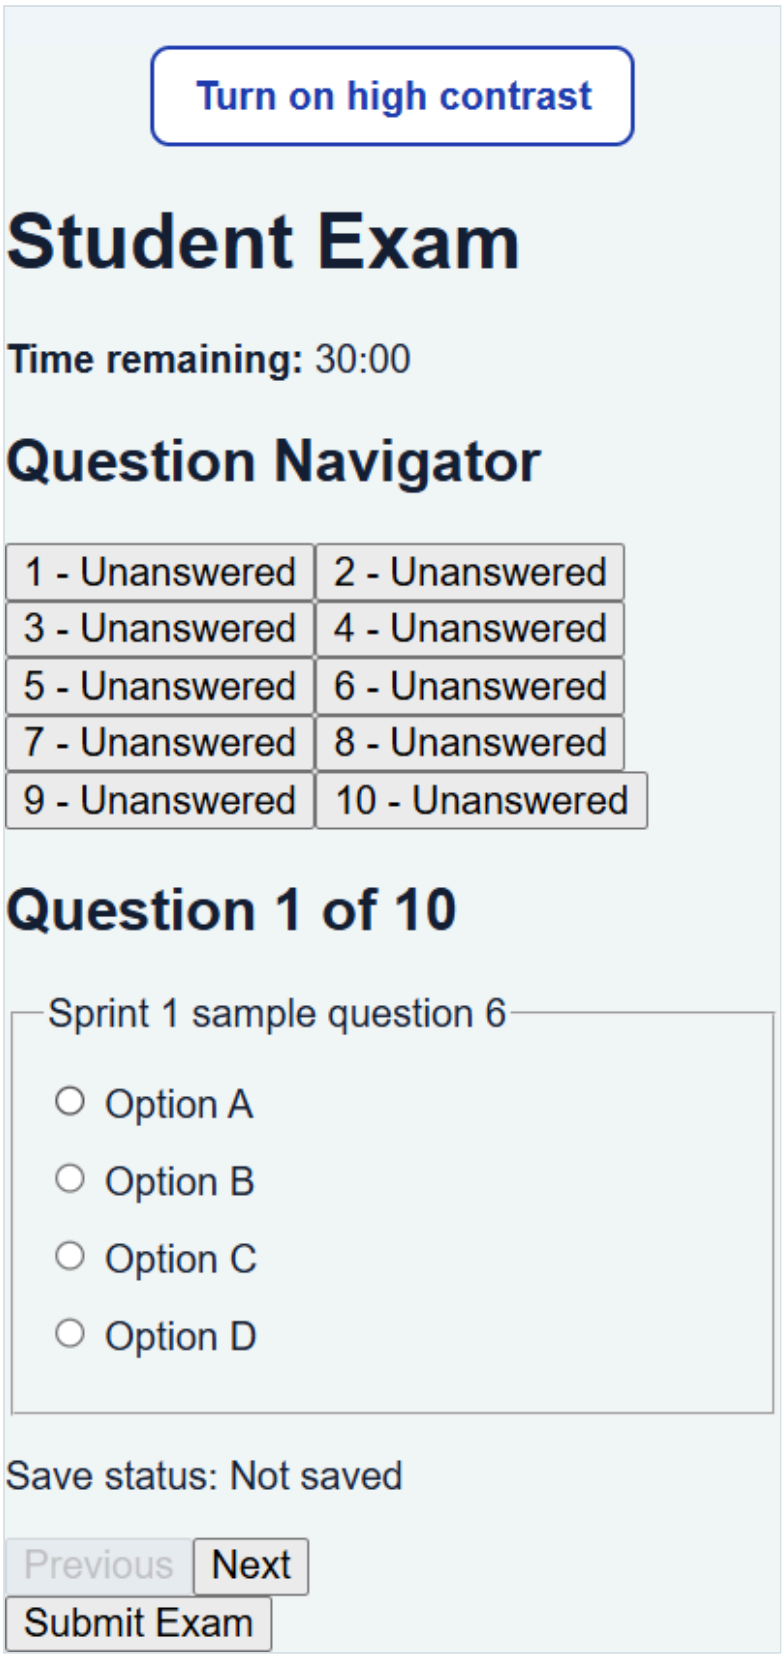

The following original PNG screenshots were captured during the approved browser run and are embedded below. They are also stored in the system temporary directory.
